Dear Hiring Team,

I'm excited to apply for opportunities in software engineering and data, where I can combine my technical background with a passion for building practical solutions. Over the past few years, I've developed experience in full-stack development, data-driven problem solving, and collaborative teamwork that I'm eager to bring into a professional setting.

As a **Full-Stack Developer Intern at Viettel CX**, I worked with a small team to design and deploy a CRM platform that improved contract management and reduced manual errors by ~30%. This gave me hands-on experience balancing technical implementation with real-world impact. In parallel, serving as a **Teaching Assistant in Data Structures and Math** at Texas Christian University sharpened my ability to explain complex ideas simply, while reinforcing my own foundations in algorithms, problem-solving, and analytical thinking.

I thrive at the intersection of engineering and data — whether it's optimizing workflows, improving user experience, or uncovering insights that guide better decisions. I enjoy tackling challenges that require both technical skill and creativity, and I'm motivated by opportunities to learn quickly and contribute to meaningful projects.

I'd love the chance to bring my energy, adaptability, and curiosity to a forward-thinking team. Thank you for considering my application, and I look forward to connecting further.

Sincerely,
Hieu Pham
